

Subsea Innovation Day – Call for contribution

Reserve May 15th for a theme day focusing on new subsea innovations and technology challenges. You are invited to propose presentation or present poster.

Location: Bergen

Time: Thursday Mai 15th, 09.00 - 16.00

Special focus will be on subsea instrumentation and measurement technology. The subsea industry is designing increasingly complex solutions. Realizing the Subsea Factory requires new process and condition monitoring. Longer tiebacks and colder area give new flow assurance challenges. Extending lifetime beyond original design required more focus on asset integrity. Adding new features on existing solutions challenge existing infrastructure.

Call for presentations and posters

You are invited to propose presentation by April 7th to jon.hellevang@ncesubsea.no. Priority will be given to presentations showing link between industry and academia. We especially encourage people to present new initiative for joint industry and R&D projects where other organizations are invited to join.

The event will have a poster session displaying new innovations and ongoing R&D projects within the topic of the day. We especially invite students to present a poster. If you like to present a poster please make a note of this and include the poster title in the comment field when you sign up for the event. Deadline for proposing poster is May 5th.

Confirmed presentations

- Challenges and R&D priorities identified by OG21. Kjetil Skaugset, Statoil, lead OG21-TTA4
- Innovation through Industry/University Collaboration. Dr. Richard D. Neilson, University of Aberdeen, King's College
- Subsea Technology Challenges –Overview of challenges for the subsea industry 2012 – 2020. NCE Subsea

Participation and cost

The event open for all and free of charge for NCE Subsea and NCE Instrumentation members and partners. Non-member fee is NOK 1000,-

Sign up

Sign up before May 13th. If you like to present poster, please include its title in the comment field.
